

Liberal Party climate change policy in 1990

Millennium Milestones
The specific goals and targets of a Liberal Government to the year 2001 include:

- The area of land to be rehabilitated under our Soil Conservation Strategy
- Plants and animals to be safeguarded until they can be taken off the Endangered Species List
- The amount of new forest lands and land for Priority and National Parks
- A date for uniform national standards on air and water pollution
- An achievable level of energy use from 'alternate' fuel sources
- A complete phase out of CFCs and halons by 1995, and a ban on their export
- A reduction in 'greenhouse gas' emissions of at least 20% by the year 2000
- A goal of 20% reduction in energy use by government authorities
- A tax review to promote sound environmental practices in industry
- Specific reductions in vehicle and power station 'greenhouse gas' emissions
- Reduced salinity in the Murray Darling River Basin
- A set date for a national facility for the disposal of intractable wastes
- Tax rewards for industries that take steps to protect the environment and products that do not
- History of rivers and waterways in need of rehabilitation, including urban waterways
- A Recycling Programme to identify amounts of paper, oil and other products that can be recovered on a national scale

SENATOR CHRIS PUPLICK
Shadow Minister for the Environment and the Arts

ANDREW PEACOCK

"We embrace the philosophy of sustainable development - we reject the false dichotomy of jobs versus the environment. We can have both, at the same time pursuing strategies of ecologically responsible development which improves our standards of living while promoting responsible conservation policies which improve our quality of life.

We will work with all Australians to achieve these goals and with the States, the conservation movement, industry, scientists and all concerned citizens. We seek a co-operative federalist approach to the solution of environmental problems but we will never resile from a willingness to act in the genuine national interest wherever that is required."

A reduction in 'greenhouse gas' emissions of at least 20% by the year 2000

A fair go for the environment

LIBERAL

A target to reduce greenhouse pollution by 20% by 2000

Liberal Party climate change policy in 2007

- Australia's emissions projected to rise by 70% by 2050
- No plan or targets to reduce Australia's greenhouse pollution
- No to ratifying Kyoto
- No additional support for renewable energy
- No investment in public transport
- No assessment of economic impacts of climate change
- No plan to protect vulnerable areas like the Great Barrier Reef

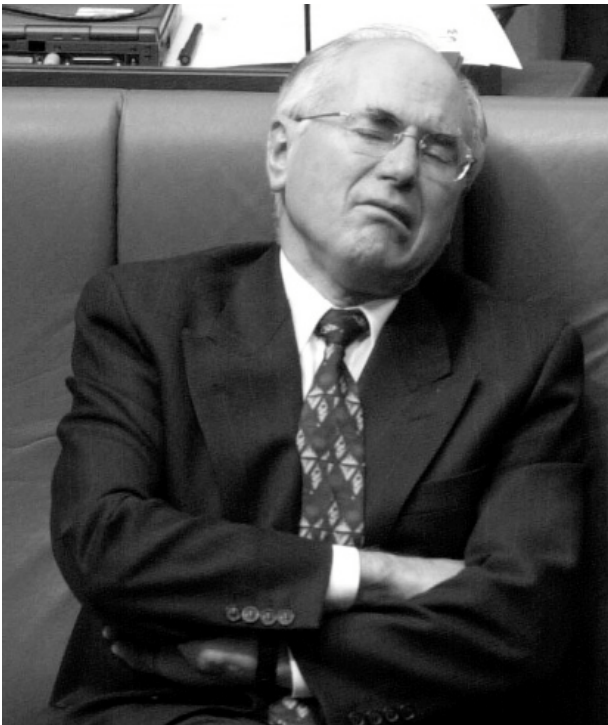

Where did the Liberal Party go so wrong?

©AAP

If you are worried about climate change, put the Liberals last until they get serious about cutting greenhouse pollution.
